#### Table 3 – Monitoring (Quarterly Noise – Limits Apply)

EPL ID	Date	Measurement Period		ed levels – – dB(A) L <sub>Aeq</sub> , 15 minute	Limit(s)- dB(A)	Wind speed (m/s)	Observations	(Potential) Non- compliance /breach
		15 mins day	-	-	-	-	-	
N1	-	15 mins evening	-	-	-	-	-	
INT	INI	15 mins night	-	-	-	-	-	-
		1 min night	-	-	-	-	-	

#### Notes:

**dB(A):** The overall level of a sound is usually expressed in terms of dBA, which is measured using a sound level meter with an "A-weighting" filter. This is an electronic filter having a frequency response

corresponding approximately to that of human hearing.

**L**<sub>Aeq</sub>, **15 minute:** The A-weighted equivalent noise level (basically the average noise level). It is defined as the steady sound level that contains the same amount of acoustical energy as the corresponding time-varying sound, in this instance over a period of 15 minutes.

**L**<sub>A1</sub>, **1** minute: The noise level exceeded for 1% of the 15 minute interval.

I/A: When site noise is noted as inaudible (I/A), no site noise was audible at the monitoring location.

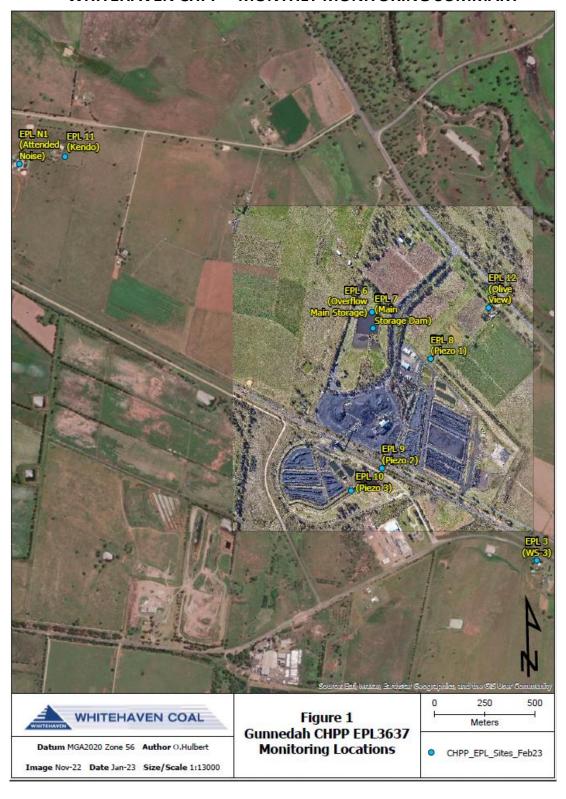

**Not Measurable (NM):** indicates that some site noise was audible, but indeterminate due to one of the following reasons:

- site noise levels were insignificant and unlikely, in many cases, to be even noticed; or
- site noise levels were masked by another relatively loud noise source, but were estimated to be less than LAeq 30 dB, which is insignificant in terms of any applicable criterion.
